

Why you should choose professional alarm monitoring?

Protect your property, and enjoy peace of mind, with professional alarm monitoring.

With a Monitored security system, an Alarm Receiving Centre (ARC) is notified of any emergency events and will respond immediately to assist you.

When the system detects a break-in, fire, or other emergency, it notifies the receiving centre staff, who will then contact relevant emergency services or another response team. There are many response options you can discuss with your provider.

24/7 security, provided by professionals

Leave the monitoring to the professionals. Have confidence that the people and assets you care about are protected, even when you are not there.

As part of a fully monitored and maintained contract, your provider will be able to offer additional services to support your system integrity and ensure that if needed, the right people will be contacted.

Texecom Monitor – alarm signalling you can depend on

Texecom Monitor is your secure alarm communications provider. Designed from the ground up to feature state-of-the-art cyber security, multi-path and multi-redundancy resiliency, and scalable, expandable, always available cloud system architecture.
